**ICOLD's President's address**

ICOLD's President's address - P.8

**ICOLD's Activities**

ICOLD's Activities - P.12

**Text:**

In the last few years, the world has seen a rapid increase in dam construction. This is due to the fact that the world's population is growing and the demand for water is increasing. At the same time, the world is facing a climate change that is causing more extreme weather events. This is leading to more frequent and severe droughts and floods. In order to meet the growing demand for water and to protect against the effects of climate change, many countries are investing in dam construction. This is leading to a rapid increase in dam construction around the world. In fact, the world's dam construction industry is expected to grow significantly in the coming years. This is due to the fact that many countries are investing in dam construction as a way to meet their growing demand for water and to protect against the effects of climate change. This is leading to a rapid increase in dam construction around the world.
