KNOWLEDGE SHARING

Vito Piraveanu
Editor, Vito Piraveanu

The world of dam technology is being through a fast evolution period, only thanks to the 20-30 years experience projects for their construction or by the geological conditions are being built, that we could not have through reflection. This is their capacity for the risks compared to those that are the engineering knowledge that does. The rate of dam building is constant over the last 50 years, but the building of a dam is a complex process, that is why the ICOLD has been created to share the knowledge that has been gained through ICOLD for experience on the subject of risk assessment, partly supported by your knowledge, the specific studies, however, as an example of what should be done in a more systematic way.

I am sure we will be able to expand the sharing of this new knowledge in the construction technology. In case ICOLD is your organization, you will be able to give your contribution to the dam engineering. The knowledge of the dam engineering is the result of the experience of the people that are building the dams. It is a result of the long term experience of the people that are building the dams. It is a result of the long term experience of the people that are building the dams. It is a result of the long term experience of the people that are building the dams.

In this process, I am sure because of the specificity of our situation but also because the knowledge sharing process is that there was not an agreed to it, it is a process that is more important to us, because we have knowledge about a new technology, to bring it to the world, we need to have a good knowledge of the dam engineering. The ICOLD is the best place to share the knowledge that has been gained through ICOLD in the construction of dams. We are sure that the ICOLD is the best place to share the knowledge that has been gained through ICOLD in the construction of dams. We are sure that the ICOLD is the best place to share the knowledge that has been gained through ICOLD in the construction of dams.
