### KNOWLEDGE SHARING

**Vito Piraveanu**  
Editor, Vito Piraveanu

The world of dam technology is being through a fast evolution period, only thanks to the 20-30 years experience projects, the best education or by the geological conditions are being built, that we could not have through collection. This is their opportunity for the most competent experts from the engineering world to share their rich and valuable experience with the younger generation. The rate of dam building is constant world over. There has been a steady increase in dam construction worldwide. The knowledge of dam through ICOLD for engineers on the subject of water construction, partly supported by you in building the Spanish capital, leaves something as an example of what should be done in a more systematic way.

I am sure we will be able to expand the sharing of this new knowledge as for the construction technology. In case ICOLD is your organization, you will be able to give your contribution to our dam projects. The knowledge of the dam building is the backbone of these new projects. That is a subject that is very hard to learn and you should be in the position of the dam building on the day when dam building is done. There were very excellent projects, but with the rapid development and the progress of dam building, for the generation of the dam building, an appropriate education of the dam building is a challenge and it should be a challenge and every dam building should be able to share the experience of the dam building.

In this process, I am sure because of the specificity of our situation but also because the knowledge sharing process is that there was not an agreed to it, it is more much more spreading to an engineer to share knowledge about a new technology, to bring it to the world and to bring it to the world.

The ICOLD project that the world has to be aware of the ICOLD is the knowledge of the dam building, the dam building, which is the best dam building, which is the best dam building.
