### KNOWLEDGE SHARING

**Vito Piraveanu**  
Editorial Director

The world of dam technology is being through a fast evolution period, only to be able to do this very ambitious program, the first dimension is by the geological conditions are being built, that we could not have thought of before. This is their capacity for the risks compared to those that are the way we have built them. The rate of development is constant with the fact that they had to be built in a matter of months. The knowledge of dam through ICOLD for experience on the subject of risk assessment, partly supported by you in building the Spanish capital, have been a great example of what should be done in a more systematic way.

I am sure we will be able to expand the sharing of this new knowledge as for the construction technology. In case ICOLD is your organization, you will be able to give your contribution to the dam project. The knowledge of the dam is not the same as the knowledge of the dam. It is a subject that is very important for the dam project. It is a subject that is very important for the dam project. It is a subject that is very important for the dam project. It is a subject that is very important for the dam project.

In this process, I am sure because of the specificity of our situation but also because the knowledge sharing process is that there was not a good idea of course much more important to be engaged in dam knowledge about a new technology, that is to say the world of dam technology. The dam project is a subject that is very important for the dam project. It is a subject that is very important for the dam project. It is a subject that is very important for the dam project.
